

The Proctor Silex® Plus Space-Saving Blender

Jar Stores Over Base to Save Space - Reduces Packaging

The Proctor Silex® Plus Space-Saving blender, besides making great smoothies or delicious mixed drinks quickly and easily, also introduces a novel space-saving design: the jar flips and fits over the blender's base for compact storage.

The blender is nearly four inches shorter in its storage configuration than when fully assembled, so it can easily fit into the cabinets of a crowded kitchen.

The Proctor Silex® Plus Space-Saving blender has 8-speeds driven by a 375-watt motor. The ample 48-ounce plastic jar and the stainless-steel blades are integrated into one piece that is dishwasher safe for easy cleanup. The jar is also designed to be countertop stable.

The compact size of the Proctor Silex® Space-Saving blender saves approximately ½-inch in both the width and depth of the product's packaging, a considerable amount that, when extrapolated over annualized production, saves the equivalent of 628 trees and 6,182 gallons of oil. An estimated 153,000 pounds of CO₂ also were avoided.*

***Environmental impact estimates were made using the Environmental Defense Paper Calculator. For more information visit www.papercalculator.org**
